ABOUT THE PLAN

Stonecrest has embarked on a project to provide a safe, connected, and integrated network of pedestrian, bicycle, and multipurpose trail facilities. The goal is to develop a citywide plan that provides both a map for future investment and a prioritized list of feasible and cost-effective strategies. The plan will further the objectives of other significant plans, including the City's Transportation Master Plan and Comprehensive Plan, as well as the DeKalb County Comprehensive Transportation Plan.

Currently, Stonecrest's biking and walking network is disjointed, with less than 25% of streets having sidewalk. The Transportation Master Plan also highlighted the lack of connectivity among city streets and identified the need to:

- Increase the connectivity of the network to improve mobility
- Provide a systemic approach to implement proven countermeasures
- Connect community facilities along key corridors
- Connect to Arabia Mountain and the South River Trail
- Focus on building new shared-use paths to maximize connectivity and useability

Plan Development Phases

Public Involvement

Community members will have multiple opportunities to get involved and provide input. This will include (but is not limited to) online engagement via an interactive project website, Community Pop-Up events, presentations to City Council and committees, and Community Open Houses.

Existing Conditions Inventory, Policy and Plan Review

Inventory existing infrastructure, demographics, and community conditions and review previous plans and studies to set the stage for development of the multimodal network.

System Appraisal and Evaluation

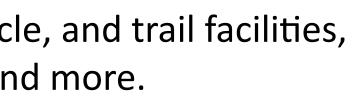

Assess the existing system to identify future needs for pedestrian, bicycle, and trail facilities, considering safety, suitability, origins and destinations, public transit, and more.

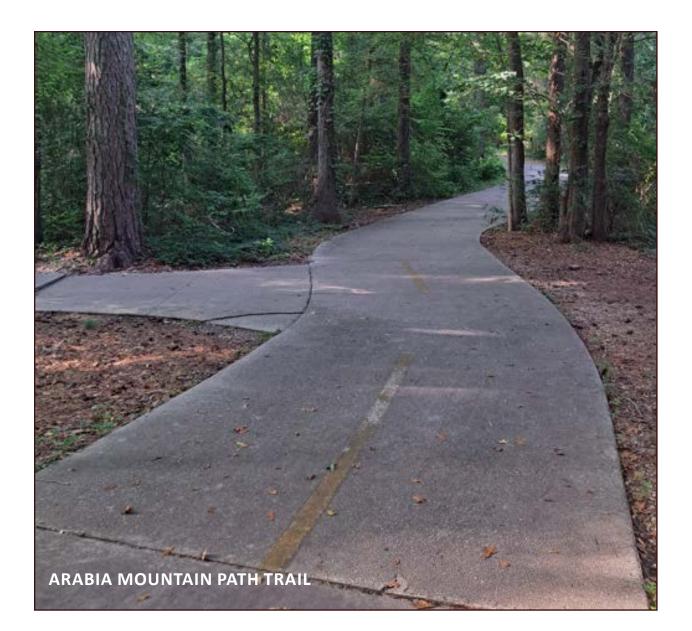

Bicycle, Pedestrian, and Trail Network Development

Develop a comprehensive and integrated network of pedestrian, bicycle, and trail facilities, including potential locations for mid-block crossings, sidewalks, bikeways, and shared-use paths that serve people of all ages and abilities.

Recommendation and Implementation Plan

Prepare a Recommendations and Implementation Plan, which will identify a long-range vision, specific projects, and policies, including master plans for sidewalks and trails, and cut-sheets for priority projects.

Task 1: Existing Conditions Inventory, Policies, and Plans Review

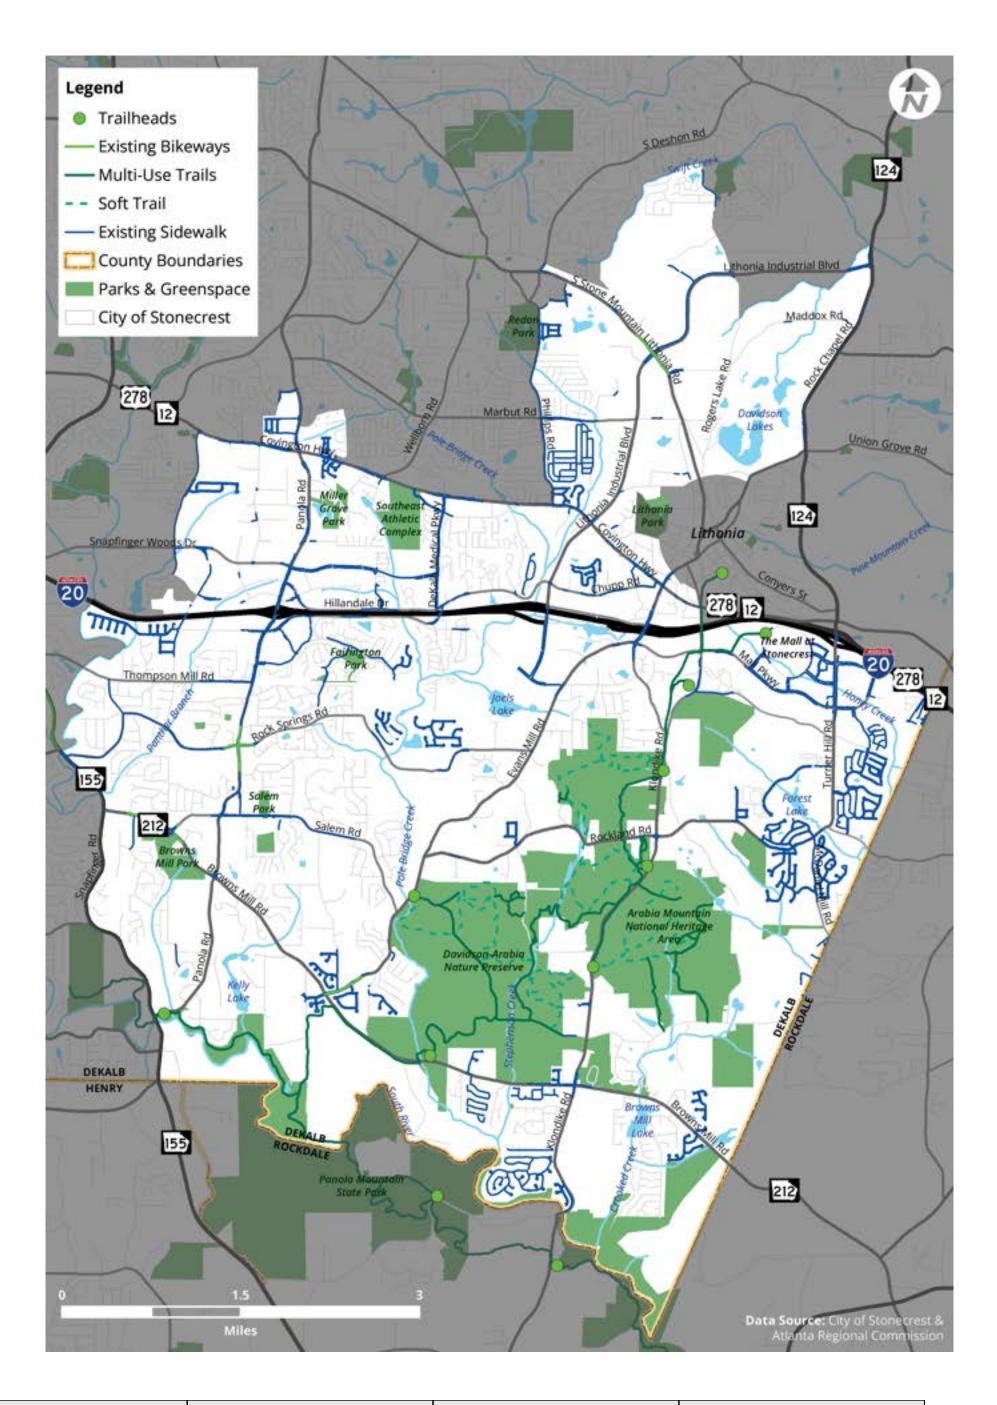

Task 2: System Appraisal and Evaluation

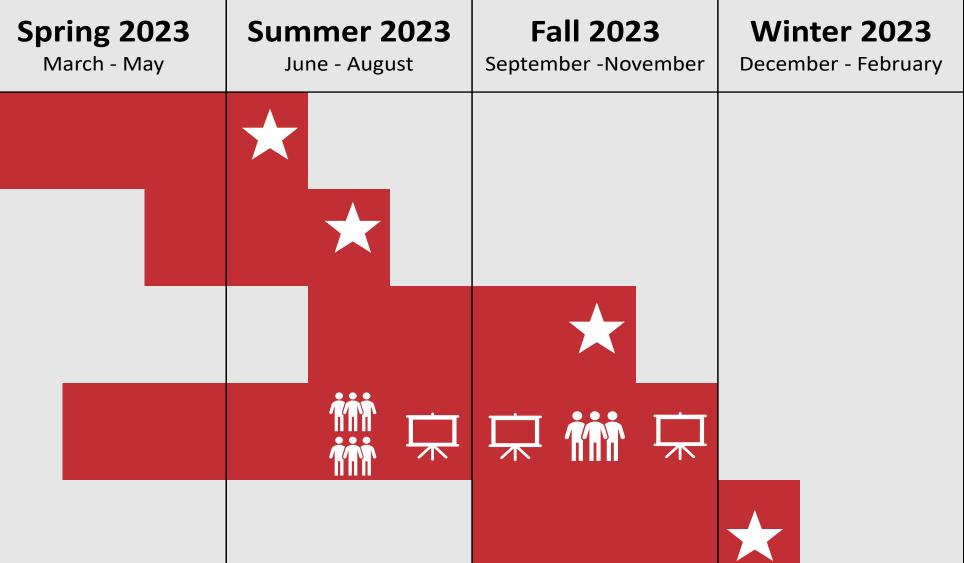

Task 3: Bicycle, Pedestrian, and Trail Network Development

Task 4: Public Outreach and Involvement

Task 5: Recommendations and Implementation Plan

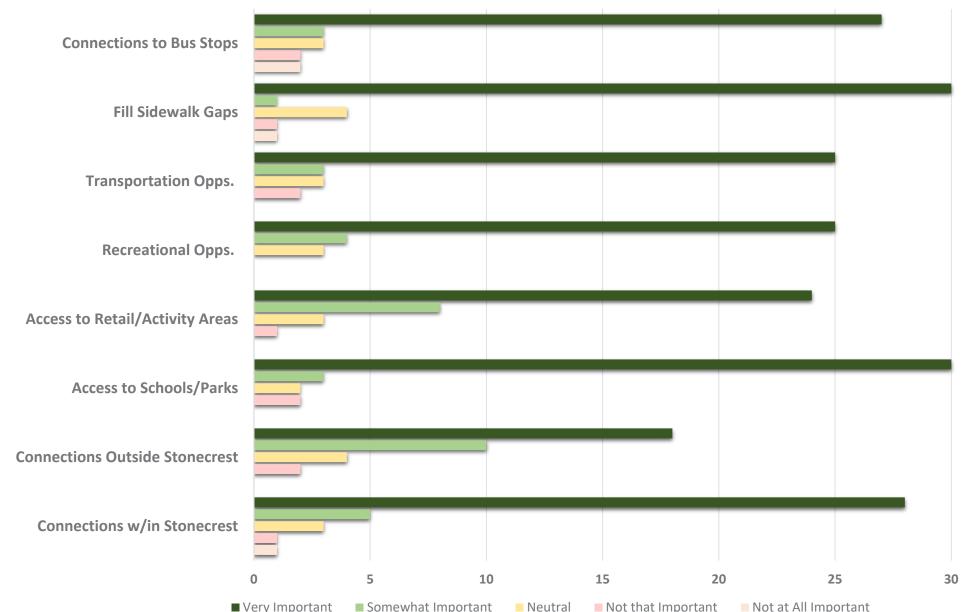

COMMUNITY FEEDBACK: WHAT HAVE WE HEARD?

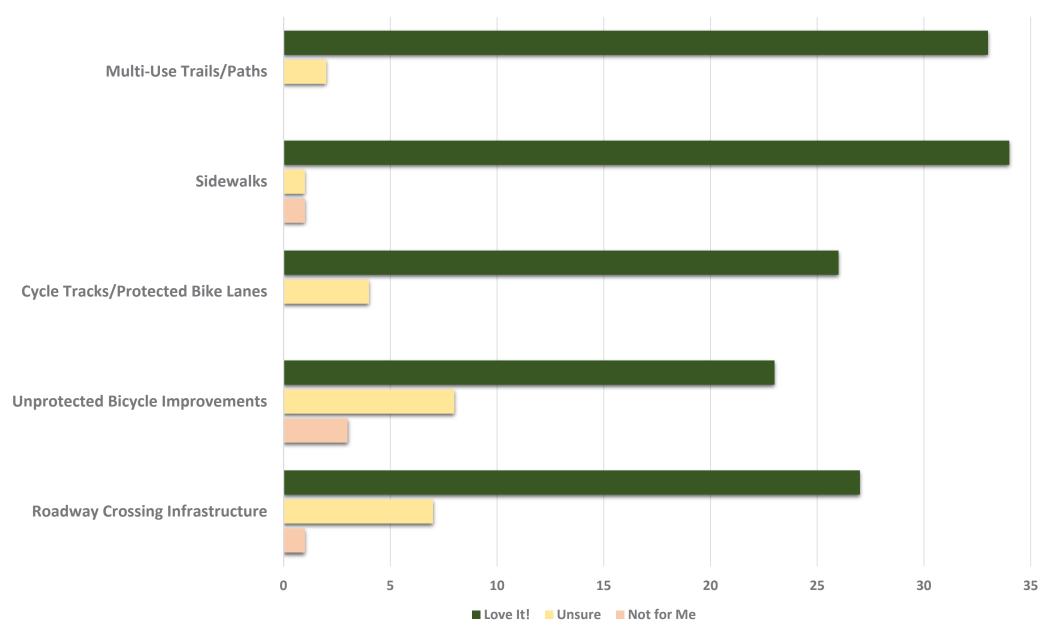

Over the course of the past six months, the project team has attended various community events, created an online engagement website, and hosted a community open house to gather input from community members about their priorities for expanding the walking and biking network and preference for the types of infrastructure used to improve non-vehicular transportation around the City. People have also been asked to provide input on where they would like to see future investment and expanded networks.

Community Priorities: Growing the Network

Priority Strategies for Expansion

Priority Facilities

Community Open House | October 11, 2023

Online Engagement Platform

Would be nice to be able to trav this portion of Rock Springs via bike (x2)

<u>Hillandale Dr:</u> Would like cycle tracks, bike lanes, or other bikeways

Thompson Mill Rd: Would like cycle track, bike lanes, or other bikeways

Fairington Rd: Would like cycle rack, bike lanes, or other bikeways

Panola Rd: Would like cycle tracks, bike lanes, bikeways

<u>rowns Mill Rd:</u> Would like cycle tracks, bike lanes, or other bikeways

Community Priorities: Locations for Improvement

Quarry Lake: Would like big ledge rim trail Chupp Rd: Need more sidewalk and street lights Would like visitor's center/museum for Arabia Mountain at the Mall

thonia Industrial Blvd: Would

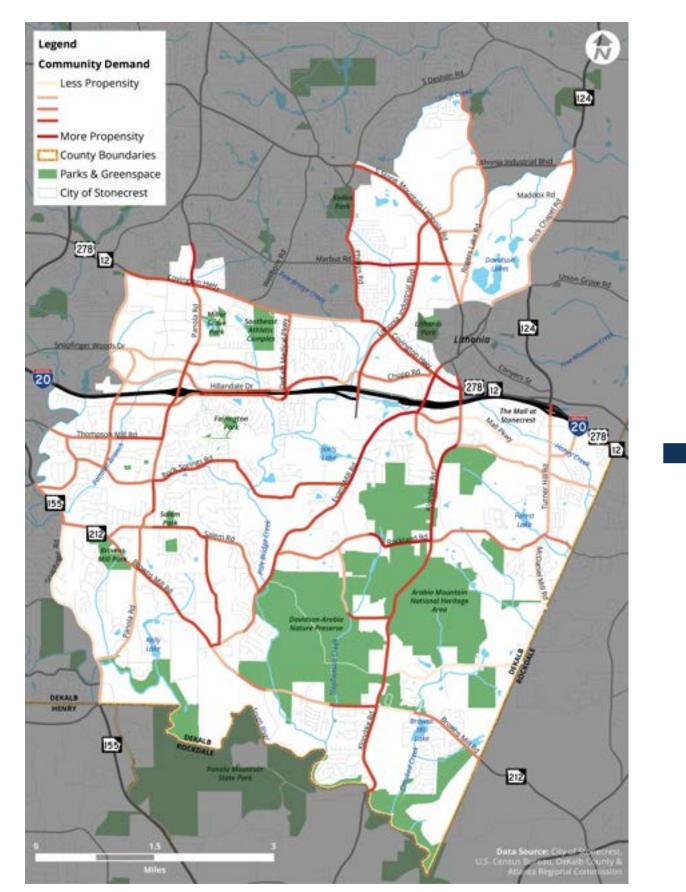

like multi-use trail

Mall Pkwy: Would like cycle tracks bike lanes, or other bikeways

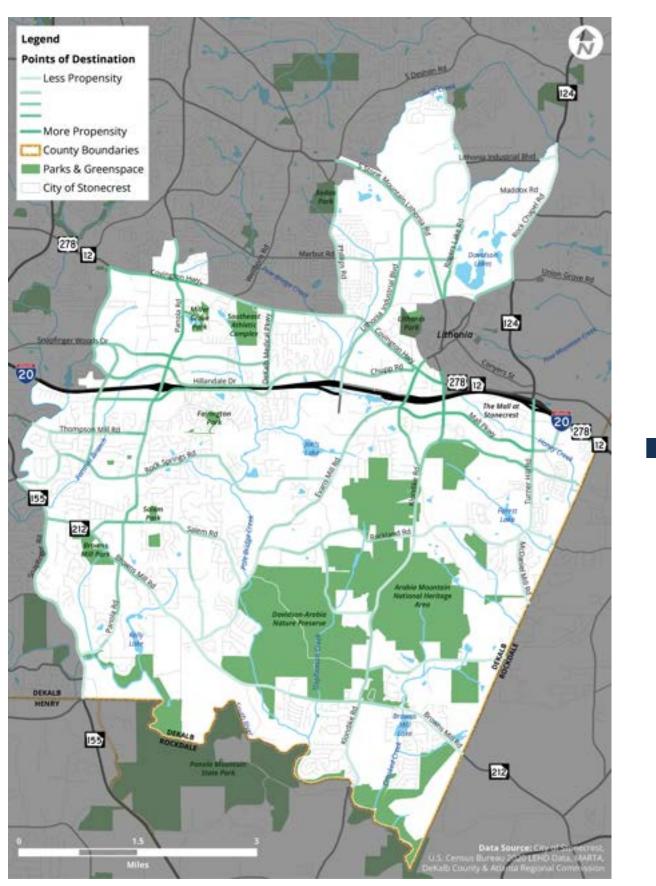

Evans Mill Rd: Would like cycle tracks, bike lanes, or other bikeways

Klondike Rd: Would like cycle tracks, bike lanes, or other bikeways

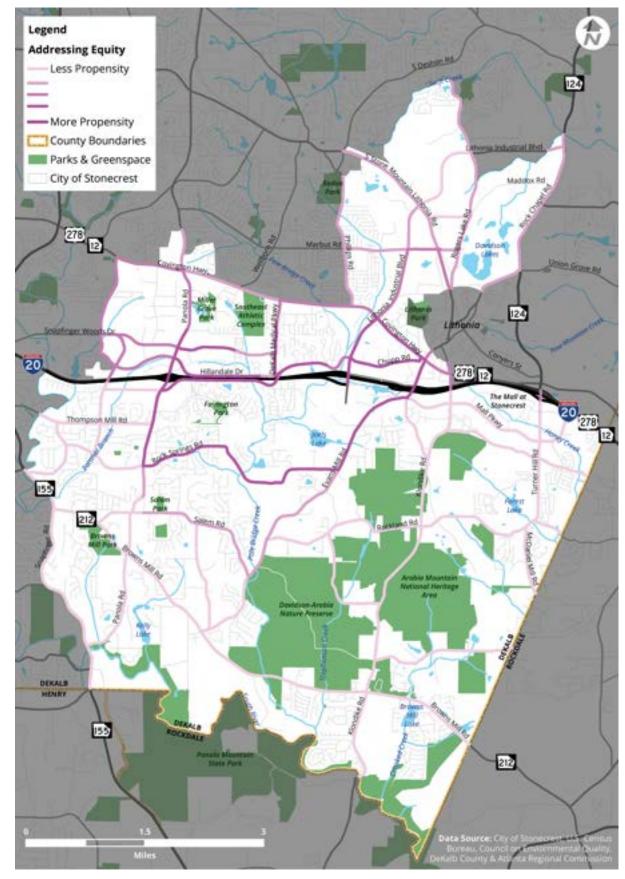

WALKING & BICYCLING PROPENSITY

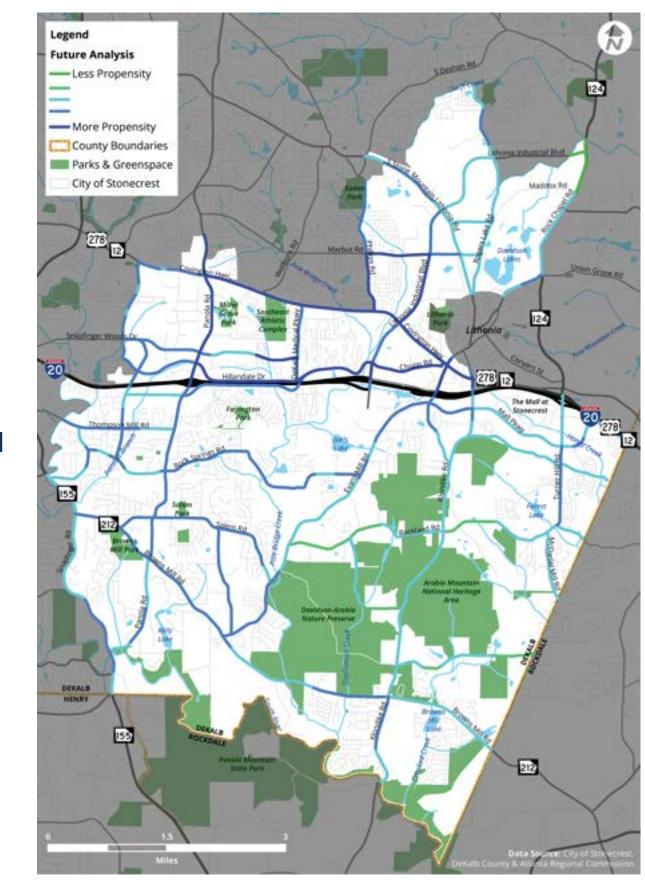

Community Demand

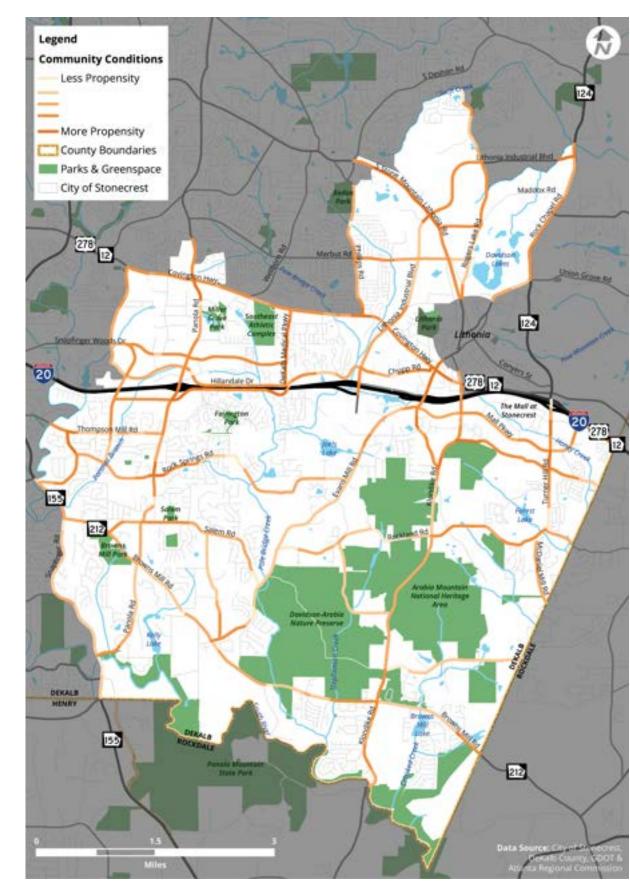

Points of Destination

Addressing Equity

Future Analysis

Community Conditions

Taking stock of existing conditions, demographics, and anticipated future conditions, the team analyzed the likelihood, or propensity, for walking and bicycling across Stonecrest. The team analyzed data and attributes in five categories to develop the overall propensity analysis:

Community Demand

- Population Density
- Populations >55 & <18
- Alternative Commuting

Addressing Equity

- Disadvantaged Census Tracts
- Household Vehicle Access
- Travel Barriers

Points of Destination

- Employment Locations
- Community Facilities
- MARTA Access

Community Conditions

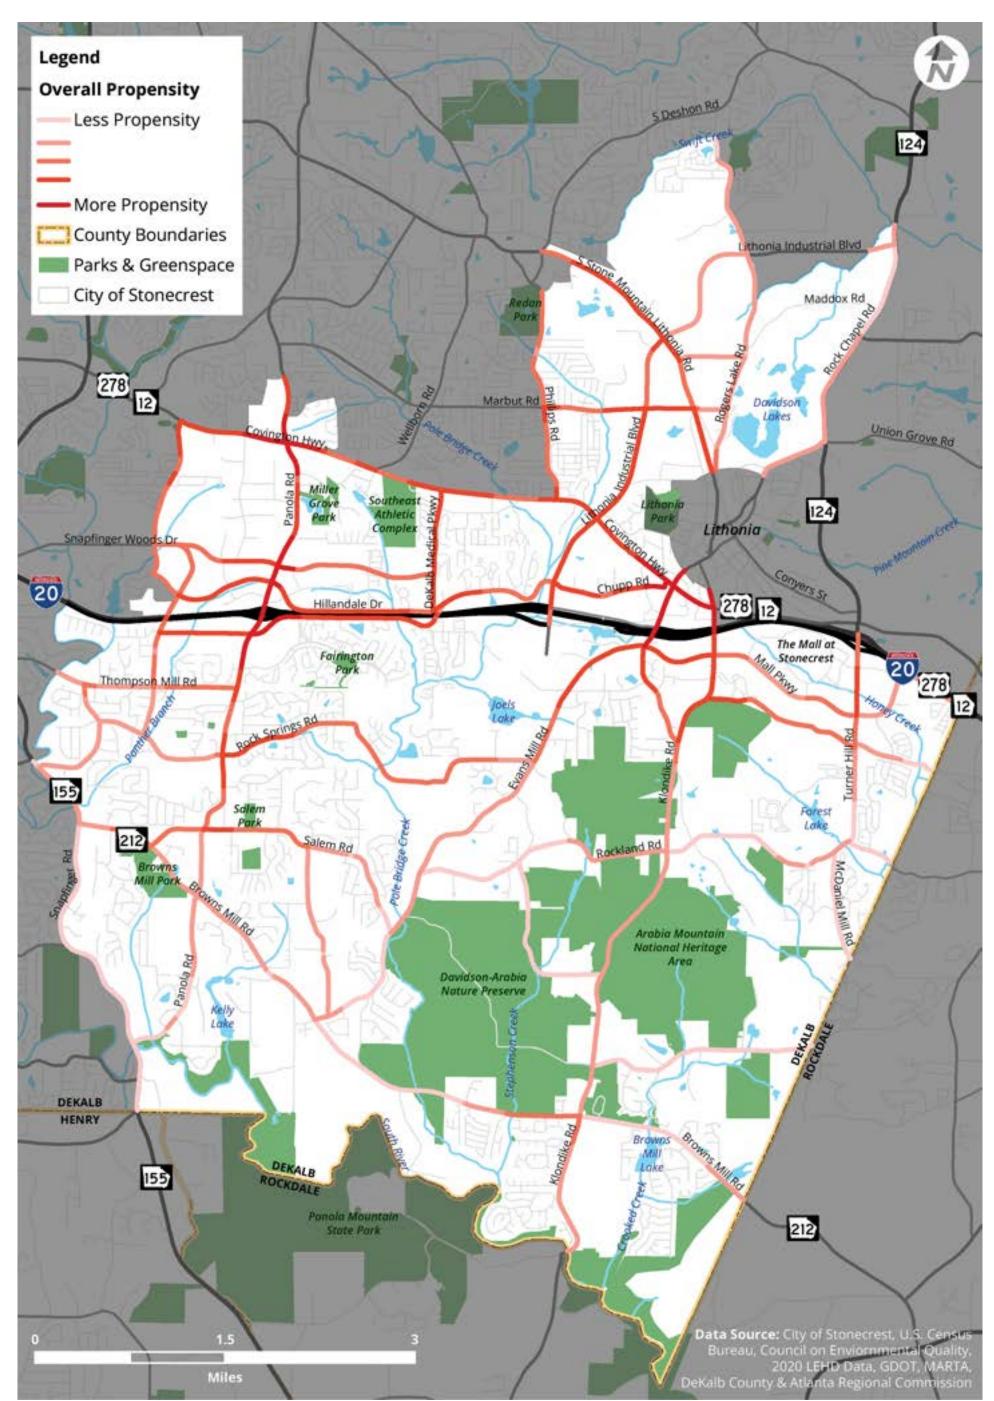

- Topography
- Proximity to Existing Sidewalks, Trails & Bike Lanes
- Crash History
- Block Density & Size

Future Analysis

- Anticipated Population & Employment Growth
- Integration with Comprehensive Plan & Transportation Master Plan

The overall propensity map above shows that walking and bicycling is more prevalent in more populated areas of the City north of I-20 as well as near schools, major employers such as the Mall at Stonecrest and parks like Arabia Mountain National Heritage Area. The project team identified ten target corridors to focus on developing a connected walking and biking network including:

- Panola Road
- Evans Mill Road
- Klondike Road
- Lithonia Industrial Boulevard
- Turner Hill Road

- Mall Parkway
- Fairington Road
- Hillandale Drive
- Covington Highway
- Browns Mill Road

PROJECT IDENTIFICATION AND PRIORITIZATION

As a relatively new City, Stonecrest has been hard at work on a number of plans that will set the stage for the future growth and development of the City, including the Comprehensive Plan 2038, Transportation Master Plan, Livable Centers Initiative (LCI) Plan, and Parks and Recreation Master Plan, among others. To inform development of the Bicycle, Pedestrian, and Trail Plan, the project team analyzed existing conditions to identify gaps in the existing biking and walking network and opportunities for improved connectivity, via new bikeways, multi-use path segments, connections to schools, public transportation, and other needs.

Building upon prior recommendations, existing conditions, and identified needs, the project team identified an initial "universe of potential projects" consisting of more than 300 possible projects. A screening of the "universe of potential projects" removed duplicative or overlapping projects, those with significant red flags or feasibility issues, and consolidated smaller segments of sidewalk projects adjacent to one another. At present, in total, there are more than 80 potential sidewalk projects and more than 70 potential biking/trail projects being considered.

Project Prioritization Framework

Following today's Community Open House, the project team will consider the feedback from participants (and those who provide feedback online) as part of an evaluation process that looks at 12 factors in 3 categories to prioritize potential projects. Each project will be evaluated on all factors, with a total of 5 points available per factor, for a total maximum score of 60 points per project. The prioritization exercise is not intended to produce a rank-ordered list of projects, but rather will identify relative priority among the draft network, to assist the City in identifying appropriate resources, seeking funding, and programming projects.

Community Needs

- **Goals and Priorities**
- Propensity for biking and walking
- Improves multimodal safety
- Improves access to essential services (*medical, grocery, etc.*)
- Connects to existing sidewalk, trail, or bike facilities
- Improves access to transit
- Improves access to schools and parks
- Potential for regional connections
- Improves bicycle/pedestrian connections in Stonecrest

Project Readiness

- right-of-way, utility relocation, and/or coordination with railroads or federal agencies) recommendations/projects (potential for impacts to wetlands, flood zones, *environmentally sensitive areas)*
- Project complexity *(requires* • Aligns with prior • Environmental screening • Community support

ABBREVIATION KEY

BPT = Stonecrest Bicycle, Pedestrian & Trail Plan

STMP = Stonecrest Transportation Master Plan

CTP = DeKalb County Unified Plan/Comprehensive Transportation Plan

PRCS = Panola Road Corridor Study

ICE = Intersection Crossing Enhancement PHB = Pedestrian Hybrid Beacon RRFB = Rectangular Rapid-Flashing Beacon

SIDEWALK & OTHER FACILITIES

Sidewalk

Portion of a street or road right-of-way, generally beyond the curb or edge of roadway pavement, that provides space for people to walk, run, skate, or use a wheelchair.

Design Guidance

- Should be designed for people of all ages and abilities
- Preferably offset from the roadway to improve comfort where space allows
- Minimum width 5 feet, but may be wider in areas with higher pedestrian activity and in response to adjacent land uses and context - can provide space for landscaping, lighting, furnishings, and signage
- PROWAG provides the standard design policy for ADAcompliant sidewalks

Est. cost range: \$1.5-\$1.7 million/mile

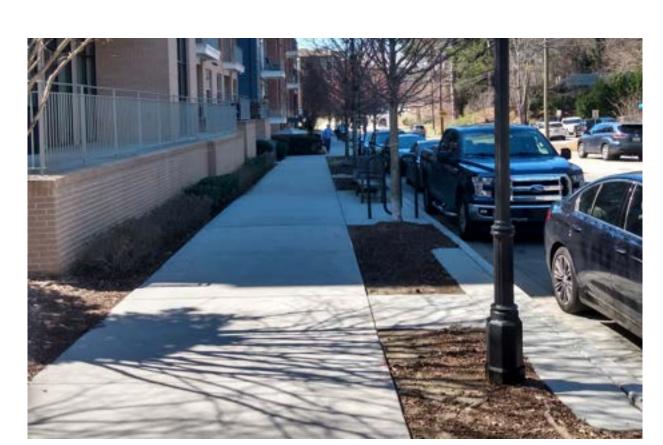

Pedestrian Hybrid Beacon (PHB)

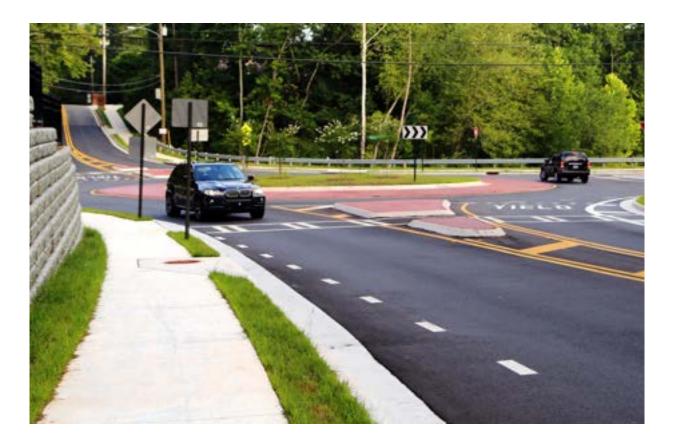

Pedestrian-activated devices designed to warn and control traffic at midblock locations and uncontrolled intersections to assist pedestrians in crossing. PHBs use red and yellow lenses to slow and then stop vehicular traffic, allowing pedestrians to cross.

Design Guidance

- exceed 35 MPH
- signals, and signage

Est. cost range: \$100,000-\$120,000 each

• Generally appropriate for multi-lane crossings, when gaps in traffic are not sufficient, or where speed limits

• Have proven effective on roads with three or more lanes and traffic volumes of 9,000 AADT or higher • Must include marked crosswalk, pedestrian countdown

Rectangular Rapid-Flashing Beacon

A device to enhance pedestrian conspicuity and increase driver awareness of pedestrians at marked crosswalks without stop signs or traffic signals with two flashing yellow indicators and accompanying signage.

Design Guidance

- Generally appropriate for multi-lane crossings with speed limits less than 40 MPH
- Should be placed on both sides of a crosswalk. If used with a pedestrian refuge island or median, an RRFB should be placed to the right of the crosswalk and on the median (instead of the left side of the crosswalk)
- Should be accompanied by pedestrian, school, or trail crossing warning sign

Est. cost range: \$20,000 - \$24,000 each

Intersection Crossing Enhancements

Signalized and unsignalized intersections can be enhanced with high visibility crosswalk markings, pedestrian and/or bicycle signals, signage, Leading Pedestrian Intervals, lighting, and other treatments.

Design Guidance

- For roads with traffic volumes 10,000+ AADT, a marked crosswalk is generally not sufficient
- High-visibility crosswalks should use durable materials inlay or thermoplastic tape
- Advance warning signs should be placed ahead of marked crosswalks
- Medians or refuge islands may be appropriate in areas with high traffic volumes and vehicle speeds

Est. cost range: Varies based on treatment

BIKING AND TRAIL FACILITIES

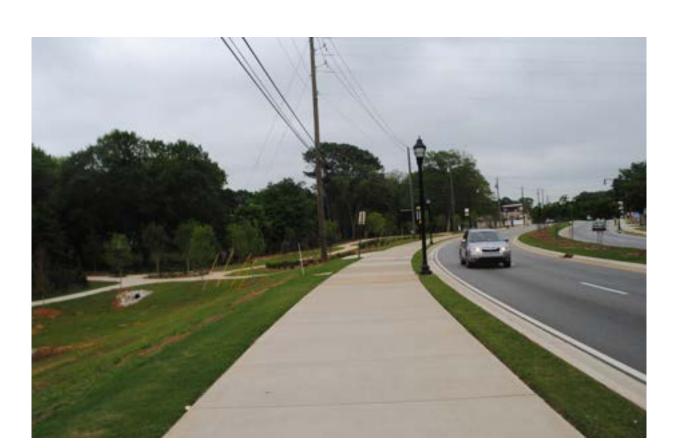

Shared-Use Path

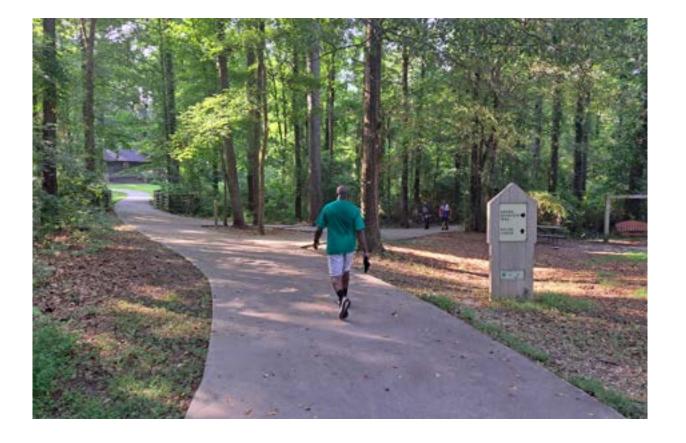

Wide paths (or trails) intended for shared use by people walking, running, biking, skating or using other non-motorized modes of transportation. Shared-use paths can be along roadways physically separated by buffers or barriers or may be travel through a park or along a stream.

Design Guidance

- Minimum width 10 feet, may be wider in areas with higher levels of activity
- On streets with speed limit of 35 MPH or higher, paths should be separated by at least 5 feet from travel lanes
- Typically paved surfaces, materials vary; centerline stripes may be used if desired; should be signed and marked

Est. cost range: \$2.4-\$4.0 million/mile (varies considerably based on context, materials, etc.)

Neighborhood Greenway

Neighborhood greenways are generally on-street bikeways that may include paved shoulders, shared lanes, or dedicated lanes - ideally accompanied by parallel sidewalks. Considered part of the overall bikeway network, they link shared-use paths or bikeways even though they may not be in the dedicated right-of-way.

Design Guidance

- considered
- space allows

Est. cost range: Varies based on treatment

• Factor distance to destinations, populations, and connections when identifying candidate locations • Traffic speeds, volumes, and number of lanes should be

• Bikeways should be at least 5 feet wide, more where

• Signs and pavement markings should be provided

Shared Lane Markings

Also known as "sharrows" these are road markings used to indicate a shared environment for bicycles and automobiles to reinforce presence of bicycle traffic on a street and recommend proper positioning

Design Guidance

- Intended to support or complete a bikeway network not a substitute for bike lanes or other separated treatments
- Suitable for low volume, low speed roadways generally roads with speeds of 35 MPH and 3,000 AADT or less
- On streets without on-street parallel parking, sharrows should be placed at least 4 feet from curb or edge of travel way (11 feet where on-street parking is provided)
- Frequent, visible placement of markings is essential (every 50-250 feet); may be accompanied by directional signs and wayfinding

Est. cost range: \$15,000-\$24,000 per mile (pavement) *markings, signs, at 250 ft spacing)*

Buffered/Separated Bicycle Lane

Exclusive facility for bicyclists located within or directly adjacent to roadway, physically separated from vehicular traffic

Design Guidance

- Suitable for providing a more comfortable experience on streets with higher vehicle volumes and/or speeds
- One-way separated lanes should be at least 5 feet wide, 7 feet or greater for rider safety and comfort
- Buffers should be at least 18 inches wide and marked with 2 solid white lines. For clarity, consider dashing the buffer where cars may cross, and use diagonal hatching or chevrons where the buffer is 3 feet wide or more
- Pavement markings may be accompanied by bollards, flexible delineators or other forms of physical protection

Est. cost range: Varies considerably based on context and design - \$100,000-\$300,000/mile for buffered to \$500,000-\$1 million/mile for protected cycle track
