I. INTRODUCTION, BACKGROUND, AND RFP PROCESS

Introduction

The City of Stonecrest is accepting proposals for qualified professional service providers to develop a Transportation Master Plan (TMP). Proposals will be considered from any GDOT pre-qualified, professional firm with experience and success in developing and preparing a Transportation Master Plan for local government. Consultants must be GDOT pre-qualified in the following categories: 1.02 (Urban Area & Regional Transportation Planning), 1.10 (Traffic Studies), and 3.06 (Traffic Operations Studies).

Background

Addressing the transportation issues facing the City of Stonecrest will require a multi-faceted approach including a proactive community involvement from a wide range of public interest groups along with the proper mix of technical analysis and policy discussion. The City’s overall transportation issues are a product of its location within the region with significant east-west through transportation movement on South Stone Mountain-Lithonia Road, Covington Highway (US 278), Interstate 20, Browns Mill Road (SR 212), and Rock Springs Road; and north-south through transportation movement on regional arterial facilities such as Snapfinger Road (SR 155), Panola Road, Evans Mill Road, Klondike Road, Lithonia Industrial Blvd, and Turner Hill Road/Rock Chapel Road (SR 124).

In addition to serving regional travel, these same facilities serve as the major travel routes for trips traveling within the City. There is a lack of significant network and connectivity thus causing local and regional trips to travel on the same roadways. Other facets of the transportation system including transit, pedestrian and bicycles, and PATH trails are also key elements of the overall transportation system that must be examined and evaluated at a community level scale. Other features of the transportation system must be examined on a more detailed basis. Major transportation corridors, individual intersections, school zones, pedestrian and access management issues require a more detailed level of analysis and evaluation. It is important that this more detailed analysis be fully integrated with the overall community level of analysis to provide a comprehensive assessment of the City’s transportation system.

Request for Proposal Process

This solicitation is a Request for Proposal (RFP). In using this method for solicitation, we are asking the marketplace for its best effort in seeking a “best value” solution to our requirement. The proposal(s) submitted by the Offeror will be evaluated by an evaluation committee. Offeror(s) should make their best effort to satisfy the requirements at their best price because a contract may be awarded based on the initial evaluation. Essentially, if an Offeror’s proposal is not evaluated as having a chance for contract award because of the content of the proposal and/or the price, the proposal will be dropped from the competitive range to save time and money for both the Contractor and City of Stonecrest.
The top 3 Offerors in the “competitive range” will be notified and given an opportunity, to hold discussions and/or demonstrations. At the end of discussions and/or demonstrations the evaluation committee will select the proposal that presents the best value to the City of Stonecrest. This selection will then be presented to the City Council for approval. If approved by the Council and other matters (insurance, bonds, etc.) have been provided in accordance with this solicitation, a contract will be awarded.
II. SCOPE OF WORK

The following Supplemental Scope shall be developed in conjunction with the City of Stonecrest’s Comprehensive Plan process and shall enhance the Comprehensive Plan’s Transportation Element scope of work by providing greater in-depth research, reviews, and analysis, and provide transportation improvement recommendations. The Transportation Master Plan (TMP) shall be a full complement to the Comprehensive Plan in terms of breath of review, involvement of the public, data collection and detailed analyzes, coordinated recommendations, and prioritized implementation strategies.

Task 1 – Transportation Needs Assessment

Data Compilation

This task will encompass the compilation of data necessary to perform the analysis and evaluation of the current and future transportation system and identify the current and future needs. This process will include the preparation of a transportation system database to support the development of the technical analysis tool, including:

- ARC travel demand model (base year of 2018 and future year 2040).
- Traffic Count data (24-hour counts and turning movement counts at major intersections).
- Waze Traffic Information (develop and leverage Waze Connected Citizens Program)
- Accident Data from the past 5 years utilizing GDOT’s GEARs (Georgia Electronic Accident Reporting System)
- Transit Routes within the City of Stonecrest and neighboring areas
- Roadway functionality: traffic flow, access points, safety, capacity, congestion, trip loads, traffic demand management and signal synchronization;
- Pedestrian and bicycle facilities
- School zones
- Socio-economic data
- Current transportation funding sources and levels. This review should include a summary of previous reimbursement funding that DeKalb County has received over the last 10 years for projects within the City as well as approved SPLOST funding.

The consultant will make recommendations on supplemental data that is needed to ensure the team’s understanding of the physical conditions, traffic volumes and
traffic flow patterns versus roadway capacity to present in the City facilitate analyses of potential Hot Spot locations.

**Review of Existing Plans**

This task will include the review and evaluate DeKalb County’s existing Transportation Master Plan’s goals, objectives, policies and Short Term Work Program (STWP), as well as any other related regional and state-wide transportation plans with regards to future economic development and land use. Identify areas of conflict and concurrence, positive and negative impacts on the City’s transportation goals, economic growth, and future mobility. Analyze the City’s existing land use patterns and recommend improvements that will enhance inter-city mobility.

- **Current plans:**
  - City of Stonecrest 2038 Comprehensive Plan
  - DeKalb County Parks and Recreation Plan
  - Stonecrest Overlay Ordinance
  - Stonecrest 2013 LCI Study
  - City of Stonecrest Development Ordinance
  - DeKalb County 2035 Comprehensive Plan
  - DeKalb County Transportation Master Plan
  - DeKalb County Transit Master Plan
  - ARC Transportation Improvement Program (TIP)
  - ARC Regional Transportation Plan (RTP)
  - MARTA CONNECT GA400
  - GDOT 2040 Statewide Transportation Plan / 2015 Statewide Transportation Plan
  - Bridge Replacement Program including GDOT Bridge Inspection Report and Loading Rating Analysis
  - Roadway Inventory
  - Capital Improvement Projects currently underway
  - City of Stonecrest and DeKalb County Functional Classification Map
Modeling of existing system
The consultant will assess the following existing transportation system: roadways, bridges, transit, pedestrian, bicycle. The consultant will also review the existing transportation/land use regulations and assessment management. The consultant should make recommendations on evaluation criteria that will be used in the assessment of the existing and future transportation system and the identification of the deficiencies. Examples of these evaluation criteria may include:

- Vehicle miles of travel at Level of Service E or worse
- Vehicle hours of delay
- Travel time to major activity centers within the City
- Percent of transit usage
- Percent of non-motorized trips
- Percent of system mileage operating over capacity
- Vehicle hours of delay per vehicle mile of travel.

Once the criteria have been established with the City, the existing transportation system will be evaluated, and deficiencies highlighted. This evaluation will serve as a benchmark for the evaluation of future transportation system improvements.

An operational model for the City will be developed using the microsimulation modeling software VISSIM and Synchro. The purpose of this model will be to examine the detailed operational aspects of the transportation system that cannot be addressed with the travel demand model. This model will facilitate the examination of the impacts of the operational improvements such as intersection improvements (turn lanes, traffic signalization, signal timing coordination, and ITS strategies). This model will be used for any necessary corridor or subarea studies and evaluations.

Perform an origin and destination study to establish the number of trips originating in and outside of Stonecrest. Waze Data should be used as a calibration check of the travel demand model. The consultant should recommend a number of zones to allow for understanding of trips that use major corridors to access each of the other zones. The deliverable will be a trip matrix by major corridor showing these travel behaviors.
Task 2 – Public Involvement
Develop a Public Participation Plan (PPP). Consultant to create and manage an interactive and continuous public participation process that includes establishing a Stakeholder Group, touching the citizens that reside in the city across the 5 council districts within Stonecrest, holding multiple meetings and interviews with multiple interest groups, using multiple communication methods and ways to ensure the greatest public outreach and participation possible including the use of social media venues, coordinating meetings with neighboring municipalities, counties and ARC transportation staffs, as well as City elected officials and City staff. The consultant will participate in all Comprehensive Plan public participation efforts.

Task 3 – Transportation Recommendation
Modeling of future system
The consultant will assess the future transportation system: roadways, bridges, transit, pedestrian, bicycle. The consultant will also review the proposed changes to transportation/land use regulations and assessment management from the Comprehensive Plan. The consultant will provide assessment of the future system based on previously established criteria to help with the identification of the deficiencies and improvements. Examples of these evaluation criteria may include:

- Vehicle miles of travel at Level of Service E or worse
- Vehicle hours of delay
- Travel time to major activity centers within the City
- Percent of transit usage
- Percent of non-motorized trips
- Percent of system mileage operating over capacity
- Vehicle hours of delay per vehicle mile of travel.

Examine travel demand forecasts and prepare performance-based standards and recommendations. Performance measures to include but not be limited to: system-wide vehicle miles of travel, transportation mode split, average travel time between selected origins and destinations, and completeness and continuity of the pedestrian and multi-trail network.

The modeled results will be used to prepare a phased improvement program in five-year increments. The model network will be adjusted to reflect any planned improvements and test potential additional projects. Use of the ARC model and its
associated socioeconomic data is important to maintain linkage to the Atlanta Region’s Air Quality Conformity Determination. The City’s parallel Comprehensive Land Use plan update process will provide modifications to this data that will ultimately feed into the future transportation network.

Recommend a STWP future infrastructure improvements plan and impacts on travel times;

Recommend criteria to prioritize all transportation improvements such as impact to reductions in travel time, relief from traffic congestion, and inter-city mobility.

**Recommendation for Transportation Program**

This task will focus on the main development of the Transportation Master Plan which will identify policies, programs, strategies, projects, schedules, responsibilities, cost and funding sources needed to assure that the transportation system adequately serves the travel needs in the short (5 years), intermediate (10 years) and long-range timeframes.

Transportation Programs to include:

- Bridge Replacement Program
- Storm Drain Maintenance Program
- Resurfacing Program using the Stonecrest Road Maintenance Plan from Digital Laser Analysis
- Sidewalk/Trail Program- The existing pedestrian and bicycle facilities should also be evaluated based on criteria recommended from the consultant such as overall connectivity and service to activity areas such as parks, schools, libraries, religious facilities, existing PATH trail assets, and other public service areas. Review the City’s pedestrian and bicycle safety, including but not limited to street and sidewalk lighting, traffic crossings, inter-parcel mobility.
- Analysis of existing mid-block pedestrian crossings and recommendations for future safety and accessibility improvements.
- Neighborhood Traffic Management Program
- ADA strategies
- School related transportation issues
- Freight movement
- Transportation Demand Management Strategies
- Traffic Operations solutions for congested corridors
• Design strategies for two-lane arterials and collectors
• Capacity improvement strategies
• Major thoroughfare plans
• ITS Program / Master Plan
• Incident Response Plan
• Access management strategies
• Walkable communities
• Functional Classification
• City of Stonecrest Development Standards
• Recommend a funding strategy based on Federal, State and local funding sources.

Traffic congestion at key intersections is a critical issue for overall operation of the roadway network. The intersection of two major roads can form the constriction point, limiting the overall capacity of the entire road. In order to address these key areas, additional focused traffic analyses will be performed on these Hot Spots. Using the GDOT Intersection Control Analysis (ICE) Policy, evaluate at least five (5) of these intersections. Provide conceptual designs and recommendations for improvements.

Create a guide to multi-modal transportation decision-making.

Based on the City’s Draft Comprehensive Plan and the City’s transportation goals, develop a comprehensive list of TMP multi-modal transportation implementation recommendations.

Examine the movement of freight through the City of Stonecrest. Truck traffic concentration or circulation of trucks in congested areas can increase overall delays, as trucks have slower acceleration capabilities and require more room to maneuver and stop.

Examine current and proposed public transit systems and plans and develop multi-modal transportation options that will enhance mobility, both within the City and through the City, that could be implemented within 5-, 10- and 20- year timeframes. The consultant should recommend a financial constraint for each list based on available funding from all sources.

The consultant is encouraged to consider creative and innovative transportation solutions throughout the process. State of the art concepts such as autonomous vehicles, intersection designs, and traffic/transportation innovations should be considered.
